

STEPHANIE MUNDELL TELLS HER STORY

The following testimonials are all from parents that have used Dr. Aron to treat their children. Many of these individuals had tried multiple specialists without success for years. Dr. Aron was able to restore the skin and give the children almost instant and permanent relief from itching and severe eczema. If you wish to correspond with any of these parents and ask questions, they can be found on Dr. Aron's Facebook Discussion Group.

Her Skin and I - A Mothers Story

Dr. Aron changed our lives. It seems he understands some things that other doctors do not. Namely that nails are dirty...children's nails are particularly dirty and eczema itches. As a result most eczema has staph. When you only treat the inflammation and dryness with steroids and moisturizer, you pretty much hide the infection then make it the perfect breeding ground for bacteria by adding moisturizer frequently. Then when the steroids aren't able to mask the raging infection any more a stronger prescription steroid is used and then a stronger. The steroids are blamed rather than the failure to treat the infection. Oral steroids do not treat the infections in the skin the way topical antibiotics do. We've seen reduced intensity in the reaction from allergens (did you know that eczema flares can cause your body to create excessive histamines, which FINALLY begins to explain the relationship between allergies, eczema and asthma that no one has been able to explain to me since all this started), and we started sleeping through the night within 3 days of treatment for the first time since birth. Dr. Aron almost has more years successfully treating eczema than I have being alive. The combination of the three in a way that is tailored to each individual patient is I think what makes the next biggest difference. In reality the most frustrating thing for me in the whole process was realizing that my vet treats eczema in our dogs (hot spots) with antibiotics, and its the last thing anyone whose treated our son has considered.
